Semi−elasticity to FFB price signal
0.04
0.02
0.00
−0.02
Sample:
30km catchment radius
50km catchment radius
Distribution assumption:
Poisson
Quasi−Poisson
Negative Binomial
Price signal averaged over:
3 years
4 years
5 years
Fixed effects:
Grid cell
Grid cell and year
Grid cell and province−year
Grid cell and district−year
Controls:
CPO price signal
Ownership
# reachable UML mills
% CPO exported
PYA outcome
Weights
Standard errors:
Grid cell cluster
Two−way cluster
